Risk management software for lightning protection

Only those who know their risk, can protect their values adequately:

O-line's simple and user-friendly risk management software offers quick and easy analysis reports on all structures that are under consideration for a lightning protection system as per IEC / SANS 62305-2.

O-line (Pty) Ltd South Africa

Email: tbs.engserv@o-line.com

www.o-line.com

The application offers a simple automatic calculation of possible protection scenarios:

The risk management tool provides an accurate report by automatically calculating possible protection measures required for your structures by determining the extent of the risk and comparing tolerable values.
